LEGRIS MANIFOLDS

Designed to connect threaded fittings or tubes using push-in fitting technology, Legris manifolds enable rapid installation and offer optimal modularity for pneumatic circuits.

Technical specifications

	Materials:	**Brass**	**Anodised aluminium**
	Fluids:	Compressed air	Compressed air and industrial water
	Operating pressure:	20 bar	20 bar
	Operating temperature:	-10°C to +80°C	-10°C to +80°C
	Connection:	G 1/4 to G 3/4	G 1/8 to G 1/2

Performance depends on the fluids, materials and tube used.

Benefits

- **Lightweight and strong:** Legris manifolds, made of anodised aluminium, combine lightness with resistance to harsh environments, making them particularly suitable for repeated assembly and disassembly operations.
- **Models equipped with push-in fittings** (models 3310) save assembly time and provide a very high level of sealing.
